

ZEVS^{PRO}

User Manual

Getting Started

Features

Optimal reception range

ZeusPro provides an up to 2X times increased coverage area by focusing the Wi-Fi reception range. By using 2 ZeusPro you can double the original coverage area over 360 degrees.

Connection speed

ZeusPro increases Wi-Fi connection speed by reducing interferences at the installation premises.

Easy to use

ZeusPro is easy to use. No app or software is required. You only need to place ZeusPro on top of the antenna and point it towards the desired area.

Sophisticated design

Designed by Mizeus, ZeusPro has a sophisticated and elegant design. It is built with a special non-metallic clip that does not interfere with the perfection of its parabolic metal reflector.

Security

By pointing ZeusPro to your private area, you can secure your wireless network so you and your family can use Internet safely and securely.

Online Gaming

ZeusPro reduces lags and disconnections.

RC Vehicles

ZeusPro increases RC transmitter and receiver signal.

Getting Started

Your ZeusPro

Metal reflector

Plastic antenna clip

Installation

Caution

Install ZeusPro on external antenna only.

Make sure ZeusPro is installed correctly.

Make sure your router supports 2.4Ghz as this product is made for 2.4Ghz.

Installation

I. First Step

Unbox the necessary components.

1. Metal Reflector
2. Plastic Clip

II. Assembly

Connect the Plastic clip by pushing it from top to bottom on the metal part. You may need to apply pressure to the sides of the plastic part for smooth assembly.

Installation

III. Positioning

After installing the plastic part, it can be freely placed on the metal reflector to match the desired antenna.

IV. Mounting

Place ZeusPro on the router antenna by using the plastic clip to hold it. Insert it from top to bottom or directly to the antenna. Please make sure that the antenna is located in the center of the reflector. The ZeusPro should be located in the middle of the antenna for best results.

Installation

V. Aiming

If you use a router that has one antenna you can amplify the range to 180 deg half around the access point and 2 times further to each direction. It is recommended to use ZeusPro on all access point antennas. You can change the amplified direction by simply panning ZeusPro to other area.

Specification

General
